CX CERAMIC BLADES

LAUBE COMBINES THE NEWEST AND BEST TECHNOLOGIES!

Laube CX combines Ceramic and Hard Chrome plating with Cryogenics for the coolest, sharpest, smoothest cutting blade in the world. Laube has combined the best of both worlds! Laube starts with a Hard Chrome plating on an already super hard, super dense cryogenic-treated blade and then combines that technology with a Ceramic cutting blade, the hardest substance (with the exception of diamonds) known to man. These combined technologies add up to a Super Blade that will save you time and a lot of money. CX Blades are super hard (90+ Rockwell) and they are also cryogenically-treated and can stay sharper up to 10 times longer than any other blade. Laube CX blades can stay up to 80% cooler than traditional blades. Laube CX Blades will glide effortlessly through any coat. Hard Chrome plating is a super tough surface that is commonly used in precision machining of super tough metals. Hard Chrome plating will not rust or wear off. All these features are only available with the Laube CX Blade line.
