

CLIPPER COMPARISON

LAUBE CLIPPERS

1

LAUBE® Clippers are cord/cordless and completely portable. Also, the LAUBE cordpack has an 18ft. cord that is interchangeable with the LAUBE clipper battery pack with each model. You are free!

2

The LAUBE Clipper's motor is sealed and doesn't allow hair and debris to get inside the motor and doesn't blow hair in your face or the animal's face. (Keeps the clipper sanitary and cool - and also keeps you healthy).

3

The LAUBE® Clippers have 4 hardened and permanently lubricated ball bearings that keep the LAUBE Clipper Handpieces cool, quiet, and low maintenance.

4

LAUBE Clippers operate at 10,000 SPM's. This high speed allows clipping wet or dirty coats with ease. The LAUBE Variable Speed™ will keep the blade sharper longer and keep the blade cool with enough torque to get through matted coats. Powerful enough to clip cattle, sheep, farm animals, horses, dogs, and cats.

5

LAUBE® Clippers are the lightest, fastest professional clippers in the world. That keeps you healthy, and making more money!

6

LAUBE® Clipper Motors are silent and don't scare the animal, making it easier to clip the animal.

7

LAUBE® has the largest clipper selection in the world. Every model has these options: cord, cordless, 2-speed, variable speed, lights, vacuum clippers, horse clippers, wide blades, etc., etc., etc.

8

All LAUBE® Clipper Handpieces have lights and are interchangeable with LAUBE battery packs and LAUBE cordpacks.

9

LAUBE® Clipper comes with a 5 Year Motor Warranty.

10

LAUBE® Clippers use the patented Direct Drive technology which keeps your blades from getting hot, helps them to stay sharp up to 10 times longer, and produces a more smooth clip.

OTHER BRAND CLIPPERS

1

Almost all other clippers are the corded type only and are limited to about a twelve foot radius from and outlet. You are stuck!

2

Most other clippers have air cooled motors, with open venting they allow dirt and hair into the motor brushes, wearing them out and blowing hair in your face, the animal's face, and around the grooming area. Debris builds up in the clipper and that poses sanitary and health problems for you.

3

No other clipper has 4 hardened ball bearings which means the handpieces get hot, causing slow down and power loss, maintenance problems, as well as valuable time wasted waiting for them to cool down.

4

Other clippers advertise a top speed of only about 4,500 SPM's or less. This makes your job harder, slower and a problem when cutting wet or dirty coats. Also, blades get hotter and dull out quicker. That costs you more money.

5

Other brands are almost twice as heavy, twice as slow, and not good for your arm, wrist, or shoulders. Especially if you have repetitive motion issues. Why make your job harder?

6

Other clippers motors are noisy and often scare the animal making it difficult to clip the animal.

7

Other brands simply do not offer anything but basic slow, heavy, old-fashioned clippers with a short cord, and maybe a 2-speed (slow and slower) options.

8

All other style clippers do not have lights with cord/cordless and only offer the plug-in type without an interchangeable battery pack option.

9

Most all other clippers made in USA have a 1 Year Motor Warranty. A cheap warranty can cost you a lot of money. Why are they afraid to give you a 5 Year Warranty? Hmmm....

10

Other clippers blade cutting is not as efficient because they use a less powerful motor and super slow SPM's (only 4,500) and some brands even use a gear reduction design, which makes the clippers get very, very hot.

"LAUBE clippers cut hair... not corners!"
